

CASE STUDY FOCUS

HRSG Maintenance Services

TESTIMONIAL

“Groome gave us a roadmap forward to predictable maintenance and efficient operations. They worked with us every step of the way to create a customized solution that worked for our needs.

The comprehensive package they developed has decreased our overall maintenance costs and improved plant output. We are thrilled with the results.”

CLIENT

West Coast HRSG

BACKGROUND

The operations department of a facility noticed poor plant performance and experienced unpredictable outages. Calls for maintenance and service were reactive, and never took place on a proactive basis. There was no strategic plan for industrial equipment care.

OBJECTIVE

The plant and its management needed a clear and predictable maintenance plan to extend the life of the equipment, to increase operational efficiency, and to reduce instances of urgent critical maintenance calls.

SOLUTION

Groome performed an operational assessment of the entire plant and provided the client with an option to fix singular operational issues, plus a more comprehensive proposal for a proactive and scalable strategic maintenance plan. Working in concert with the plant’s operations managers, Groome customized the proposal to fit the priorities and budget of the client.

RESULTS

The client implemented Groome’s strategic maintenance plan option and realized incredible results. The integrity of the catalyst system improved, and the work environment became more stable and predictable. The improvements led to a 15% decrease in maintenance costs, increased plant output and an annual net gain of more than \$1 million.
